SOUMMITH CHALLA

Bellevue, WA | 513-301-6821 | soummithr11@gmail.com

SUMMARY

Full-Stack Software Engineer with 3+ years building scalable, high-throughput systems across the stack, from Java and Go back ends to React and TypeScript front ends, in fast-paced agile environments. Expert in Java and Go microservices, RESTful APIs, SQL databases, and Kafka messaging for large-scale transaction processing and SOA. Proven track record of cross-functional collaboration, reducing technical debt, and driving customer-focused impact at scale.

SKILL SET

Languages & Frameworks: Java (8+), Go, Spring Boot, TypeScript, JavaScript, React.js, Python, SQL, Ruby on Rails
Cloud & Messaging: AWS (Lambda, SQS, CloudWatch, Secrets Manager), Azure, Docker, Kubernetes, Kafka
API & Service Frameworks: Smithy, Coral, RESTful APIs, GraphQL, SOAP, OAuth2/JWT
Build & CI/CD: Brazil build tools, Apollo, Jenkins, GitHub Actions, Azure DevOps, ARM templates
Databases & Testing: MySQL, SQL Server, Redis, Spring Data JPA/Hibernate; JUnit, Mockito (90%+ coverage), Agile/Scrum

PROFESSIONAL EXPERIENCE

Software Development Engineer II *Apr 2026 - Nov 2026*
Amazon *Bellevue, WA*

- Contributed to Amazon's **EDM** (Enterprise Document Management) platform, delivering document storage, e-signing, rule-based collection, reviews/approvals, and workflow automation across HR domains including ERC, Transfers, Exits, and M&A.
- Built and maintained EDM services in **Go** using **Smithy** and **Coral**, serving document management needs across Amazon.
- Built EDM front-end pages for recreation config, moving recreation logic out of static files and into **DynamoDB** so users can update it from the UI instead of deploying code for every new requirement.
- Fixed a logging-pipeline resource policy issue using **AWS Lambda** and **SQS**, and added **CloudWatch** alarms to improve service visibility.
- Supported the Notification Services team's PTNS-to-CXT migration and automated **CI/CD** pipelines with **Brazil build tools** and **Apollo**, improving deployment speed and release reliability.
- After an org-level reorg, moved to **Aza**, Amazon's HR assistant chatbot, and co-led the backend migration from **Aza 1.0** to **Azora**, a re-architected **Java** and **Python** platform that replaced direct agent-to-user responses with a modular orchestration pipeline.
- Engineered Azora's core architecture in **Java**: **guardrails** for safe, policy-compliant responses, an invocation layer for **MCP**, skill, and **agent** routing, and a response-rewriting layer that unifies downstream agent outputs into one consistent, user-ready answer.
- Cut backend **latency** on the agent orchestration path and removed **PII** from agent outputs; redesigned the generic "Thinking" indicator into a stage-aware status showing the active agent call, followed by a summarized answer in **under 10 seconds**.
- Built **React** front-end screens for Aza and Peccy, including Peccy animation updates, and a thumbs-down feedback dashboard (**React** front end, **Go** back end) that helps the team identify production issues across both products and resolve bugs faster.

Software Developer *Feb 2025 - Mar 2026*
Elevance Health *Remote, NJ*

- Built and shipped responsive, accessible **React** front ends and **Go RESTful** back-end services for user-facing portals, redesigning key workflows end to end and reducing support call volume by 40% across a 500K+ user base.
- Developed **Python** and **AWS Lambda** data pipelines to process and validate eligibility and transactional data, improving processing accuracy by 12%.
- Redesigned user-facing consent and access workflows using **TypeScript**, **React**, and advanced client-side state management, improving **OAuth 2.0** authorization reliability and increasing user adoption by 15%.
- Developed and maintained **Go** microservices for the Access & Notifications platform, delivering secure **RESTful APIs** with granular permission scopes, audit logging, and real-time session management.
- Built and deployed a **GenAI**-powered API documentation assistant with **OpenAI GPT-4** and **LangChain**, automating code example and schema documentation generation and accelerating developer onboarding by 20%.
- Optimized **PostgreSQL** and **MongoDB** queries and data access layers, cutting API latency by 25% and improving real-time UI responsiveness.
- Integrated structured logging and **AWS CloudWatch** monitoring to improve cross-stack traceability, cutting Mean Time to Diagnosis (MTTD) for production issues by 30%.

Software Engineer I *Jan 2021 - Jul 2023*
NCR Corporation *Hyderabad, India*

- Implemented **Redis** caching in **Java microservices** to cut database load by 30% and optimize data-retrieval latency, and built 20+ **Spring Boot** REST APIs with sub-200ms responses; also exposed **SOAP/REST** endpoints that handle large **JSON** payloads efficiently, reducing data-transfer overhead by 30% and improving speed by 25%.
- Increased customer engagement by 25% by extending a Java-based, rule-driven promotion engine, and raised automated test coverage from 45% to 85% using **JUnit**, **Mockito**, and integration tests, cutting production issues by 40% and runtime errors by 50%.
- Migrated on-prem Java services to **AWS** using **Docker** and **Kubernetes**, and used **Azure Kubernetes Service (AKS)** and cloud functions for container orchestration and serverless workloads, reducing infrastructure costs and downtime by about 30% and accelerating deployments by 40%.
- Integrated Java services with third-party providers over **REST/SOAP/XML** and **Kafka**-based messaging, and collaborated closely with product managers, QA, and solution architects to align designs with business goals and deliver resilient, high-throughput systems.

EDUCATION

MS, Information Technology - University of Cincinnati (Cincinnati, OH) *Dec 2024*
B.Tech, Computer Science - JNTUH (Hyderabad, India) *Aug 2022*

CERTIFICATIONS

AWS Certified Cloud Practitioner | IBM AI Developer Certification | GitHub Foundations Certification
